2013-2018: How has the e-Learning world changed?

What has changed in the e-Learning world in the last five years? Very.

First of all, the tools used to create eLearning courses have significantly improved.

Furthermore, **responsive design** has acquired a central importance, becoming a "must-have" compared to five years ago.
The increase in the centrality of responsive graphics is based above all on the fact that, among the current students, the younger users are digital natives and they place high expectations in eLearning courses: they are expected to access the courses with any device, in any place ... and companies in the eLearning sector must be able to meet this need.

In addition to the availability of new types of devices, the technology offers a wide range of novelties for eLearning, like **interactive videos** (based on virtual reality).

Finally, eLearning training professionals are more and more demanding towards **eLearning platforms (LMS)**: they look for platforms offering an optimal experience to the trainee and to the platform administrator, more reporting capabilities and possible further integration with systems external to the LMS.

Last but not least, the understanding of what works in eLearning has improved as well as **trust in eLearning within organizations**.
